

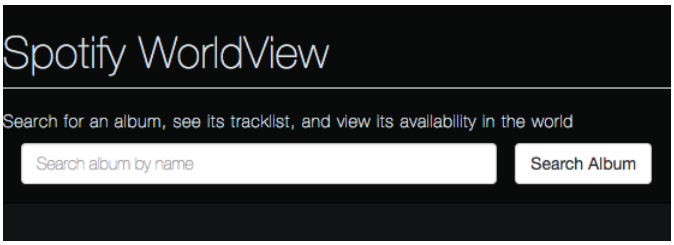
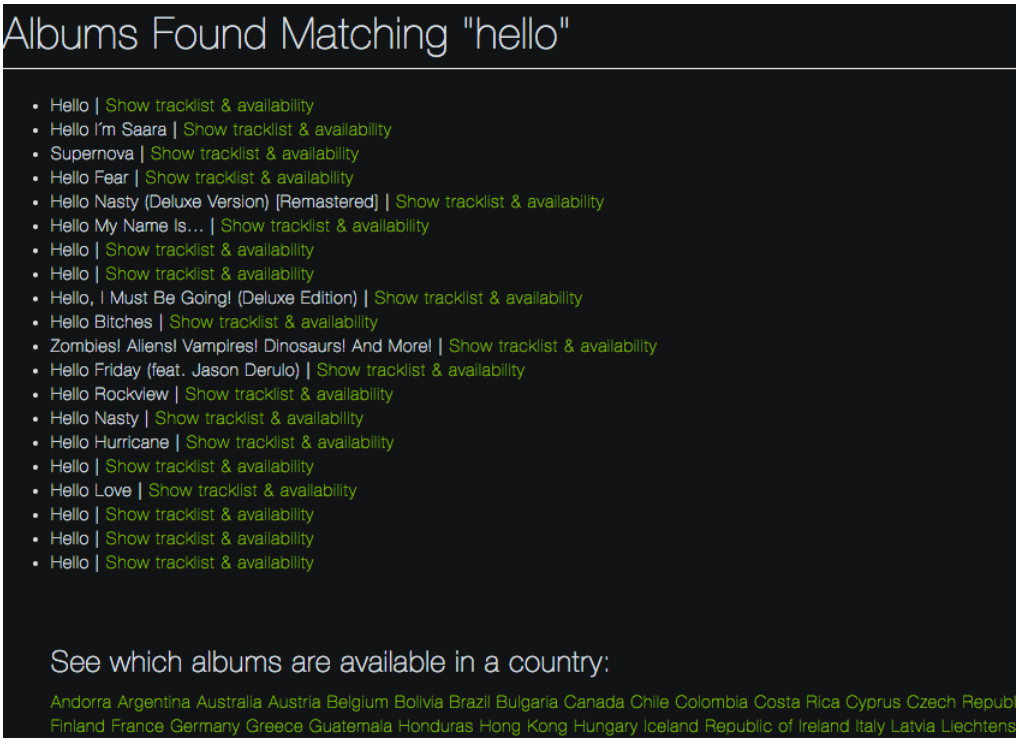
*Functionality: View countries the album is available in*

Theresa Pham
Assignment 4
UI Mockups

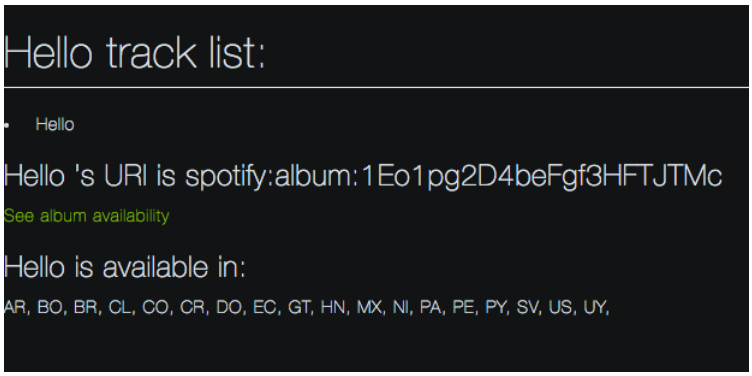
**1. Strive for consistency**
The application has a consistent color scheme of black, white, and green



**2. Enable Frequent Users to Use Shortcuts**
Once someone has used the application, if they close out of it and go back to the URL, it shows the screen that the user last viewed.

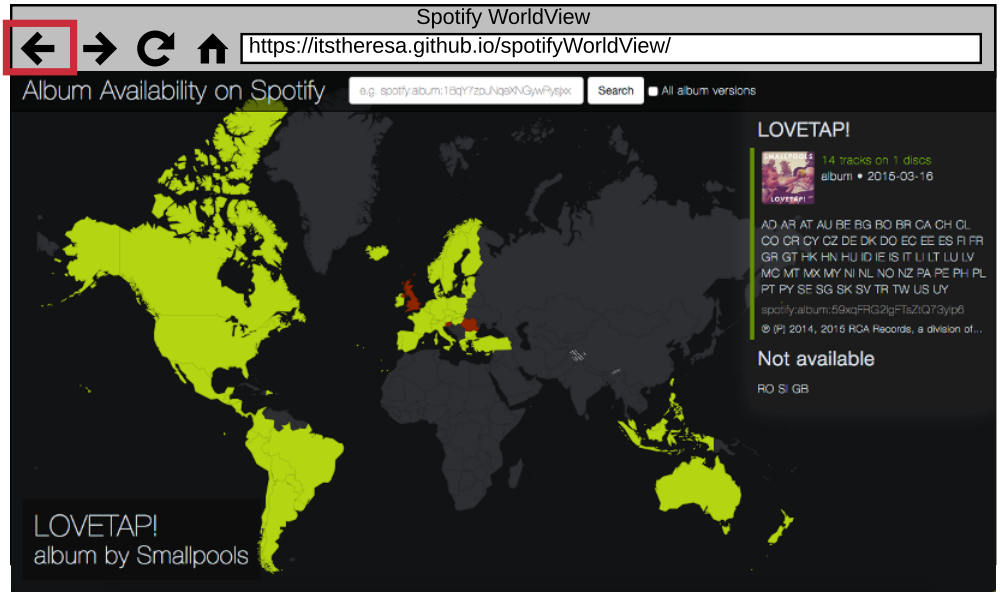


**3. Offer Informative Feedback/4. Design Dialogs to Yield Closure**
The application will display text on the page after searching (i.e. Albums Found Matching "[keyword searched]" to let the user know that their action was processed properly.



*Functionality: Error message for invalid inputs*

**5. Offer Simple Error Handling**
When an invalid album or something that is not an album is searched, the map will gray out and display an error message similar to the one seen here.



*Functionality: Allow use of back arrow to see previous searches*

**6. Permit Easy Reversal of Actions**
The back arrow can be used to look through previous searches.

**7. Support Internal Locus of Control**
Because there are few controls, it is easy for the user to be in control of the application and understand how to do what they wish to do with the application. Especially with being able to choose the specific album they wish to view availability for.

**8. Reduce Short-Term Memory Load**
Moving from page to page, there is generally some display that reminds the user of the action or search that occurred on the last page.
